## FUSE CONSIDERATION

This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture.

To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse.

The input line fuse suggest as below :

Modules	Fuse Rating (A)	Fuse Type
RCD20-36□□□U	4	Slow-Blow
RCD20-72□□□U	3.15	Slow-Blow

## THERMAL CONSIDERATIONS

The power module operates in a variety of thermal environments.

However, sufficient cooling should be provided to help ensure reliable operation of the unit.

Heat is removed by conduction, convection, and radiation to the surrounding environment.

Proper cooling can be verified by measuring the point as the figure below.

The temperature at this location should not exceed "Maximum case temperature".

When operating, adequate cooling must be provided to maintain the test point temperature at or below "Maximum case temperature".

You can limit this temperature to a lower value for extremely high reliability.

- Thermal test condition with vertical direction by natural convection (20LFM).

## TYPICAL APPLICATION

### UVLO

This series product has ultra wide input range. It could cover many kind of nominal input voltage in one module. In order to preventing incorrect operating under different input system, it offers UVLO adjustment by connecting a resistor to set UVLO threshold.

### UVLO Constants

Model	A	B	C
RCD20-36□□□U	14804	144000	16500
RCD20-72□□□U	22330	321000	24000

### UVLO Equation

Start-up Voltage

$$V_{\text{start-up}} = \left( 0.8 + \frac{A \times R_{\text{UVLO}}}{A + R_{\text{UVLO}}} \times 5 \times 10^{-6} \right) \times \left( 1 + B \times \frac{C + R_{\text{UVLO}}}{C \times R_{\text{UVLO}}} \right)$$

Shutdown Voltage

$$V_{\text{shutdown}} = 0.785 \times \left( 1 + B \times \frac{R_{\text{UVLO}} + C}{R_{\text{UVLO}} \times C} \right)$$

UVLO Setting resistor	151.5 KΩ	28.87 KΩ	15.95 KΩ	8.42 KΩ	5.72 KΩ	4.82 KΩ

### Hold Up Time

Generally, connecting a large number of hold up capacitors on input are necessary to get a long duration of hold up time for S2, C2 described in EN50155. The Bus pin features excellent function can simply connect capacitors to Bus pin with less quantity of capacitors. It helps reduce layout area and smooth the inrush current.

For further information, please contact P-DUKE.

## OUTPUT VOLTAGE ADJUSTMENT

Output voltage set point adjustment allows the user to increase or decrease the output voltage set point of the module. This is accomplished by connecting an external resistor between the Trim pin and either the +Output or -Output pins. With an external resistor between the Trim and -Output pin, the output voltage set point increases. With an external resistor between the Trim and +Output pin, the output voltage set point decreases. The external Trim resistor needs to be at least 1/16W of rated power.

### Trim Up Equation

$$R_U = \left[ \frac{G \times L}{(V_{o,up} - L - K)} - H \right] \Omega$$

### Trim Down Equation

$$R_D = \left[ \frac{(V_{o,down} - L) \times G}{(V_o - V_{o,down})} - H \right] \Omega$$

### Trim Constants
