TYPICAL APPLICATION

The schematic for typical application is shown as below.

Surge protector clamps over-voltage to a safe value in order to protect the power module from damaging. According to RIA12, the module should keep working during input surge occurs.

This surge protector can be used for 72V · 96V and 110V battery system of railway application. Input range of DC-DC converter also has to meet 72V · 96V and 110V system input range.
